

Dear drycleaner,

Would you like to boost your income by \$10,000 a month without working any more hours and without adding any overhead?

If you're like most cleaners today, your supply costs are up, your energy costs are up your labor costs are up, but your sales are down... maybe even WAY down.

The fact is, dry cleaning is in decline.

Fewer customers are bringing smaller orders less frequently. That means a smaller paycheck for you, which in time will get even smaller.

Is there anything you can do?

Yes, there is. 18 months ago a drycleaner in Santa Barbara began applying the power of principal-less interest right from her cleaning plant and is now earning more than \$30,000 a month in residual income. She still has her business, but she doesn't have the worries she used to have.

I, too, am just like you. My background is in real estate and in the last 6 months my income dropped to almost nothing. I had no choice. I had to find an answer quickly... and I did. Principal-less interest is truly a miracle. In 6 short months I'm back on my feet and I'll never go back to real estate again.

Here's my question to you. If you could add \$10,000 a month in extra income from the privacy of your plant without any additional overhead, would it be worth having lunch with me to learn how?

If so, let's talk. I guarantee our time together will change your life forever. Call today.

Laschelle Gardner

P.S. There's no risk. You can keep your plant and your business, but you'll be shocked at how quickly this new venture dwarfs your drycleaning income. I guarantee it. And remember... it's all done from your present location without any additional overhead.
